## PROCESSING GUIDE

<b>■ Extruder Type</b>	Standard extruders for elastomeric or thermoplastic processing
<b>■ Screw configuration</b>	Low compression screw with L/D of 20 to 25 and compression ratio of 1:1.2
<b>■ Tooling</b>	For insulation pressure tools, for jacketing tube tools are recommended. Note: Pressure Tooling may have an effect on low temperature flexibility.
<b>■ Temperature profile extruder</b>	The profile shown below may vary slightly depending on extruder type, head design & output.

<b>■ Maximum mass temperature</b>	170-180°C
<b>■ Drying</b>	Not necessary if the compound has been stored in original packing under cool (max. 30°C) and dry conditions. Mecoline compounds used from open packing require pre-drying during 4–6 hours at 60–70°C.
